

Network Hardware

Across

1. Used to direct messages on a LAN. When it receives a message it directs it only to the device it is addressed to.
4. Hardware that allows different computer networks to connect together.

Down

2. Network _____ Card (NIC). Allows a device to connect to a network and allocated a unique address to the device.
3. Used to direct messages on a LAN. When it receives a message, it sends it out to all devices connected to the network. Only the device it is directed to will accept the message and all other device will ignore the message.
