

Types of Cyber Attack

Draw a line to joint the name to the correct description

Active attack

Spies on a system, looking for vulnerabilities and gathers data about the system

Passive attack

When a person is tricked into giving information away to a cybercriminal so they can gain access to a computer network

Social engineering

Uses software to gain access to the network which can then corrupt or steal data

Insider attack

An employee or person associated with the business steals sensitive information to give away to others or cause malicious damage

Work in pairs to come up with ideas for how a company can reduce the risks of each of the following attacks:

Active attack	
Passive attack	
Social engineering	
Insider attack
